## Job Requirements

- Diploma or Bachelor's degree in Mechanical, Electrical, Mechatronics, Industrial, Biomedical Engineering, or a related field.
- Engineering experience or internships preferred (but not required).
- Strong problem-solving, analytical skills, and attention to detail.
- Effective teamwork, clear technical communication, and efficient task management.
- Eager to learn and contribute to innovative technical projects.
- Willing to join our dynamic team in PuloGadung, Jakarta, and Bogor.

## Job Descriptions

- Collaborate with the engineering team to design, develop, and optimize engineering systems or processes related to medical devices or other technical projects.
- Assist in the implementation and testing of prototypes and production processes, ensuring compliance with engineering standards.
- Prepare detailed engineering documentation, including technical specifications, system requirements, and design changes.
- Coordinate with cross-functional teams to ensure technical requirements are met within set timelines and budgets.
- Provide technical support and troubleshooting during product development, ensuring efficient problem resolution.
- Assist in conducting performance analysis and data evaluation to improve product efficiency and quality.
